Dipsol of America

Press Release

Expansion of Worldwide Approval Specifications

Dipsol is pleased to announce the expansion of its worldwide approval specifications by adding General Motors (GM) GMW 16730 approval for black Acid High Zinc Nickel functional and cosmetic standard requirements. Dipsol has already obtained a number of approvals from GM.

Dipsol IZA-2500 Acid Zinc Nickel Process™ with the impressive Trivalent black IZB-256 and NT-1811 system has surpassed the GM requirements.

Dipsol is working with several partners in the North American market to approve them via a list of stringent quality and process requirements to meet GM standards.

The process is available globally and Dipsol technical staff is ready to offer support.

For Release October 14th, 2013
